### WA Gold Exploration Update

- **Multi-tier drill programs – air core, auger, RAB and RC – completed, underway or planned – in concerted exploration drive across eight gold targets in WA’s Eastern Goldfields.**
- **Air Core Reconnaissance Drilling Programme completed at the Valley Floor gold prospect in WA’s Eastern Goldfields.**
- **Close spaced Auger Drilling commenced at three Spargoville gold prospects in WA’s Eastern Goldfields.**
- **RAB Drilling programme at a further three Spargoville gold prospects scheduled to commence later this month.**
- **Approvals currently sought for RC drilling programme at the 5B gold mine, Spargoville.**

Tychean Resources Ltd (ASX: TYK) (**Tychean** or **Company**) is pleased to announce that it has completed an initial Air Core drilling programme of 54 holes for 3,747m at the Company’s 100% owned Valley Floor Gold Prospect located approximately 10 kms south of the town of Kambalda, on Lake Lefroy, in the Eastern Goldfields of Western Australia. Drilling concluded on 22<sup>nd</sup> October 2013.

The programme was essentially Reconnaissance Drilling to test the lake sediment/basement interface and basement lithologies within an area of prospective interpreted structures for gold mineralisation at a drill spacing of 80m x 200m.

All analytical results from the drilling are expected to be returned within two weeks.

An extensive programme of ~1,400 close spaced Auger drill holes has commenced over the Deja Vu and Fugitive North and South prospects located within the Spargoville Project, also south of Kambalda. The programme has been designed to further define and extend previously identified gold in soil/auger anomalies, to a drill spacing of 20m x 50m, and is expected to generate several priority drill targets.

This programme is expected to take two weeks to complete, with results available in December.

A RAB Drilling Programme of ~80 holes for ~4,000m is planned to commence late November 2013, at three target areas adjacent to the Wattle Dam Gold Mine, being 8500N, Core Farm and Golden Orb East prospects. Planned drilling will be completed to a minimum drill spacing of 20m x 50m focused on the above prospects.

Results from this programme are not expected to be available until January 2014.

Approvals have been sought for an RC Drilling Programme at the 5B Gold Mine in a campaign designed to test for the extension. This mine enjoyed a brief period of production in 1995/6.

Tychean believes the prospect has potential for near term production.
